HCL Team's:	HCL-LC-Apps		
Problem Manager:	VELURI Pooja (HCL)		
Organisations:	None		

Description

The issue is due to the "APPS_SUZUKI_MARINE" table was created in VIAP & was later dropped . While the drop operation was not synched properly , table was recreated in VIAP with updated columns. As a result, the sync attempted to apply the new creation in VIAS, causing the error: "table already exists." DB Team had to kill the active user sessions in VIAP and later dropped the table from both VIAP and VIAS , post which the DB was in sync.

Description

To improve the performance of the query responsible of confirming the order and to do so we are going to purge some tables.

Steps-

1. Delete all records returned by the following queries;

```
select * from vs_delttime_criteria where filter_xaccount_id is not null and filter_xaccount_fk is null;
```

```
select * from vs_delttime_criteria where filter_customer_id is not null and filter_customer_fk is null;
```

```
select * from vs_delttime_criteria where filter_spr_id is not null and filter_spr_fk is null;
```

```
select * from vs_delttime_criteria where from_platform_id is not null and from_platform_fk is null;
```

```
select * from vs_delttime_criteria where to_platform_id is not null and to_platform_fk is null;
```

```
select * from vs_delttime_criteria where from_country is not null and from_country_fk is null;
```

```
select * from vs_delttime_criteria where to_country is not null and to_country_fk is null;
```

2. Update foreign key of the following columns;

In order to update the missing data, you can run following query delivered by Wexlog :

```
update vs_delttime_criteria set from_area_fk = (select pk from vs_area where vs_area.area_id = from_area_id and area_class='O') where from_area_fk is null and from_area_id is not null;
```

```
update vs_delttime_criteria set to_area_fk = (select pk from vs_area where vs_area.area_id = to_area_id and area_class='O') where to_area_fk is null and to_area_id is not null;
```

```
update vs_delttime_criteria set to_cgn_fk = (select pk from wsr_ore where wsr_ore.id = to_cgn_id) where to_cgn_fk is null and to_cgn_id is not null;
```

update vs_delttime_criteria set scan_create_platform_fk = (select pk from wsr_ore where wsr_ore.id = scan_create_platform_id AND ORG_LEVEL = 4)
where scan_create_platform_fk is null and scan_create_platform_id is not null;

check the data using following querie:

```
select * from vs deltime criteria where from area id is not null and from area fk is null;
```

```
select * from vs deltime criteria where to area id is not null and to area fk is null;
```

```
select * from vs_delttime_criteria where to_cgn_id is not null and to_cgn_fk is null;
```

```
select * from vs_delttime_criteria where scan_create_platform_id is not null and scan_create_platform_fk is null;
```

Problem Statement - Can able to perform order confirmation process smoothly in VIA

Problem solution - To improve the performance of the query responsible of confirming the order and to do so we have purged some tables.

Benefit - Order confirmation process is faster and smoother after purging the tables

Comment by **Rishi SAXENA** [26/03/2025 11:55]

Queries have been implemented successfully to purge data.

Description

The migration of the dashboard that presents information on our transportation means With this dashboard, we want to be able to track information like the weight of parcels transported by means, distance traveled by means etc. We want to deploy this indicators on all Europeans countries were the CAT LC is represented.

Comments

Comment by SINGH Janardan [12/06/2025 09:18]
Benefits: •Single data source Power BI DB in SQL Server •New source structure Oracle ->Power BI SQL DB> -> Power BI •Low refresh time 5 min – 15 min, previously ~1hrs •Centralized monitoring and shared documentation •No manual monitoring on data source and report •Low refresh time •Easy data modelling
Comment by SINGH Harsh [12/06/2025 09:16]
Problem statement: •Data source path Oracle >Jasper/KPI LC/Manual Files> Outlook->Sharepoint-> Power BI Automate -> Power BI [Long path of data source] •Multiple tools/software used like Power Automate, Sharepoint, Outlook, Power BI, Jasper, Oracle •Manual monitoring about data source and flows •High refresh time taken •Complex data modelling

Solution:

- Single data source for all power BI reports i.e., SQL Server -> Data will load from Oracle to SQL Server using SQL Jobs
- No dependency on other tool and platform like Jasper, Power Automate (Flow) , SharePoint.
- No manual intervention to monitor outlook, SharePoint and Power automate flows. Manual effort will be saved up to 15 Hrs/Month
- Report refresh and load time is reduced as removed multiple steps , directly loading data from SQL server to Power BI using Power BI Enterprise Gateway
- Refresh time reduce from ~1 hour to 15-20 min only.
- New Model is very easy to understand and techno friendly

Benefits:

- Single data source Power BI DB in SQL Server
- New source structure Oracle -> Power BI SQL DB> -> Power BI
- Low refresh time 5 min – 15 min, previously ~1hrs
- Centralized monitoring and shared documentation
- No manual monitoring on data source and report
- Low refresh time
- Easy data modelling

Comment by [Rishi SAXENA](#) [26/03/2025 11:54]

Migration of the dashboard done successfully.

Issue Summary: Incident ID: HCLSM-227042 Reported by: Ricardo Lopez from Alcalá de Henares Affected Users: Approximately 200 Priority: SEV-2 Impact: Blocked Description: Unable to obtain any report or send information to customers or suppliers due to a Jaspersoft error on the server. Resolution: The issue was resolved by restarting the Jasper services. The resolution was confirmed by Ricardo Lopez, who acknowledged that the reports were working fine after the services were restarted. 5 Whys Analysis: Why was there a Jaspersoft error on the server? Because the Jasper services were not functioning properly. Why were the Jasper services not functioning properly? Because there was an issue with the database connection. Why was there an issue with the database connection? Because the cursor context was not found (Invalid cursor number). Why was the cursor context not found? Because of a potential issue with the database configuration or a temporary glitch. Why was there a potential issue with the database configuration or a temporary glitch? Because the database settings might not have been optimized or there was a transient error. Preventive Action: Implement monitoring and alerting mechanisms to detect and address database connection issues promptly. Schedule regular maintenance and health checks for the Jasper services to ensure they are functioning correctly.

Comment by KUMAR Yogesh [11/02/2025 11:51]
Detailed Problem Statement: The user reported that the Rucher functionality in VIA was not working. The support team identified that due to a regression from patch 2.99.1, the replanning for pickup orders was not functioning correctly in Rucher. Precise Resolution Statement: The support team deployed the patch provided by Wexlog using ECR (HCLCR-7599). After the deployment, the user confirmed that the application was working fine. 5 Whys Analysis: Why was Rucher in VIA not working? Because replanning for pickup orders was not functioning correctly. Why was replanning for pickup orders not functioning correctly? Because there was a regression from patch 2.99.1. Why did the regression occur in patch 2.99.1? Because the patch introduced changes that affected the replanning functionality. Why were changes introduced in the patch that affected the replanning functionality? Because the patch was not thoroughly tested for all functionalities, including replanning for pickup orders. Why was the patch not thoroughly tested for all functionalities? Because there might have been gaps in the testing process or insufficient test coverage for the specific functionality. Conclusion: The root cause of the issue was the regression introduced by patch 2.99.1, which was not thoroughly tested for all functionalities, leading to the malfunction of replanning for pickup orders in Rucher. To prevent such issues in the future, it is essential to ensure comprehensive testing of patches before deployment, especially for critical functionalities. Preventive Action Plan: Collaboration with the CAT Business Team: The support team will work closely with the CAT Business team during the testing phase to ensure that all critical functionalities are thoroughly tested in every release and its patches. Notification to Wexlog: The team will notify Wexlog to ensure they provide high-quality code to prevent regressions in future releases and patches. These steps aim to enhance the testing process and improve the quality of code provided by Wexlog, thereby preventing similar issues from arising in future updates

Detailed Problem Statement: User Reported that Rucher in VIA is not working			
Precise Resolution Statement (if service restarted – service name, server name, and what was the need for service restart): Support team found that due to regression from the patch 2.99.1, where replanning for pickup orders is not functioning correctly in Rucher. Team deployed the patch which was given by Wexlog using ECR (HCLCR-7599), post which user confirmed that application is working fine.			
Business Impact: User Reported that Rucher in VIA is not working			
Root Cause/Potential Root Cause: Under Investigation

Detailed Problem Statement: The user reported that the Rucher functionality in VIA was not working. The support team identified that due to a regression from patch 2.99.1, the replanning for pickup orders was not functioning correctly in Rucher.

Precise Resolution Statement: The support team deployed the patch provided by Wexlog using ECR ([HCLCR-7599](#)). After the deployment, the user confirmed that the application was working fine.

5 Whys Analysis:

Why was Rucher in VIA not working?
Because replanning for pickup orders was not functioning correctly.

Why was replanning for pickup orders not functioning correctly?
Because there was a regression from patch 2.99.1.

Why did the regression occur in patch 2.99.1?
Because the patch introduced changes that affected the replanning functionality.

Why were changes introduced in the patch that affected the replanning functionality?
Because the patch was not thoroughly tested for all functionalities, including replanning for pickup orders.

Why was the patch not thoroughly tested for all functionalities?
Because there might have been gaps in the testing process or insufficient test coverage for the specific functionality.

Conclusion: The root cause of the issue was the regression introduced by patch 2.99.1, which was not thoroughly tested for all functionalities, leading to the malfunction of replanning for pickup orders in Rucher. To prevent such issues in the future, it is essential to ensure comprehensive testing of patches before deployment, especially for critical functionalities.

Preventive Action Plan:

Collaboration with the CAT Business Team: The support team will work closely with the CAT Business team during the testing phase to ensure that all critical functionalities are thoroughly tested in every release and its patches.

Notification to Wexlog: The team will notify Wexlog to ensure they provide high-quality code to prevent regressions in future releases and patches. These steps aim to enhance the testing process and improve the quality of code provided by Wexlog, thereby preventing similar issues from arising in future updates

MANAGEMENT SUMMARY INC. IMPACT

Users reported that EasyCAT application was not working.

HCL Support team found that there is key column missing in VS_BOOKING table and Wexlog shared below work around to fix the bug & DBA team

performed the same.
create the column CUSORD_STATUS in the table VS_BOOKING same than VS_CUSORD: vs_cusord.ord_status (varchar2(3)).
Root Cause: The missing column CUSORD_STATUS in the VS_BOOKING table was due to a change implemented in [HCLCR-6361](#) (Delivery of the CAT-VIA WexVS 2.95.3).

RCA METHOD – 5 WHY's	
ISSUE	WHY IT HAPPEN?
Why was EasyCAT not working?	Because there is a key column missing in the VS_BOOKING table.
Why is there a key column missing in the VS_BOOKING table?	Because the column CUSORD_STATUS was not created in the VS_BOOKING table.
Why was the column CUSORD_STATUS not created in the VS_BOOKING table?	There were database errors in both EasyCAT (order creation) and VIA (trip allocation). After consulting with Wexlog, they proposed adding the column vs_booking.cusord_status (varchar2(3)) to the VS_BOOKING table.
Why were there database errors in EasyCAT and VIA?	This was identified as a code issue. Wexlog fixed it in the delivery 2.96 done last week. They requested the removal of the column once 2.96 is deployed in production.
Why was the column not added initially?	The HCL Support team found the missing key column in the VS_BOOKING table. Wexlog shared a workaround to fix the bug, and the DBA team performed the necessary actions to create the column CUSORD_STATUS in the VS_BOOKING table, similar to VS_CUSORD.ord_status (varchar2(3)).

CONCLUSIONS & RECOMMENDATIONS	
Summary of Issue	Users reported that EasyCAT application was not working.
Summary of Resolution	HCL Support team found that there is key column missing in VS_BOOKING table and Wexlog shared below work around to fix the bug & DBA team performed the same. create the column CUSORD_STATUS in the table VS_BOOKING same than VS_CUSORD: vs_cusord.ord_status (varchar2(3)). Root Cause: The missing column CUSORD_STATUS in the VS_BOOKING table was due to a change implemented in HCLCR-6361 (Delivery of the CAT-VIA WexVS 2.95.3).

Description

The Issue is related to multiple SSIS packages which are running under SQL Agent as a batch files and whenever it get fail Zabbix raised an alert in the system.

- 1) Multiple queries are going in Deadlock situation specially during morning time when multiple jobs are running. Problem ticket raised to further analyze the problem
- 2) Sometimes source files are having data issues for which we are making aware to suppliers to ensure correct files are getting raised with correct formats.

Runner - 60

Comments

Comment by [KUMAR Yogesh](#) [30/08/2024 10:04]

In order to resolve this issue, we have done changes in the SSIS package, In old process there was two and more Update and select statement running at the same time due to which deadlock situation created.

We have re design and now all update and select statement are running in sequence one after other.

Also, we have fine-tuned some SQL query as well for fast processing of data.

Comment by [KUMAR Yogesh](#) [30/08/2024 10:04]

Comment by [SHARMA Amit \(HCL\)](#) [07/08/2024 12:11]

Issue was due to SSIS package where two and more updates was running at the same time for some conditions, we redesigned it and running statements in sequence instead of parallel to avoid the deadlock.

We monitored the situation after changes and now this issue is fixed and no more alert for the failure.

VIAP and VIAS not in sync (HCLPB-1455)

 [HCLPB-1537] DB Scripts to be executed on production Created: 07/03/2024 09:44 Updated: 07/03/2024 10:38 Due: 31/03/2024 00:00 Resolved: 07/03/2024 10:38

Description

1. Only standard (agreed and approved) DB scripts to be executed on production DB. These will be approved by track leads of HCL.

2. non-standard scripts need to be reviewed and approved by Track lead and SME.

3. Scripts will be executed in UAT before it will be executed in production.

4. Select needs to run first and backup of data will be taken before insert, update and delete will be executed.

5. Scripts will only be executed in production under shadow of peer.

Incident# HCLSM-133771 ** Incident Logged: 01-Dec-23 14:20 CET ** Detailed Problem Statement: Users were facing slowness while accessing VIA & JASPER applications. Precise Resolution Statement (if service restarted – service name, server name, and what was the need for service restart): The HCL Support team found that there was some load for a few minutes on node-2 (frlbmwex02.groupecat.com) due to ongoing month-end activities, which caused blocking session in the database. The team had killed the session and noticed an improvement in the performance. For further improvement in the application, the support team performed "Create Index VS_RATING_TEMPLATE_INV_IDX in VIAP production database under (HCLCR-4569)" & release a patch in the production "Delivery of the CAT-VIA WexVS 2.89.2 under (HCLCR-4628)". Business Impact: Users were facing slowness while accessing VIA & JASPER applications.	Incident Resolved: 09-Jan-24 11:00 CET

Classification: Confidential			
INITIAL ROOT CAUSE ANALYSIS REPORT			
Incident# HCLSM-134921		Problem Record# HCLPB-1388	
**			
Incident Logged: 07-Dec-23 11:08		Incident Resolved: 08-Dec-23 14:59	Outage Duration: 01h 25m
**			
Detailed Problem Statement: Users reported that the EAD portal was down.			
Precise Resolution Statement (if service restarted – service name, server name, and what was the need for service restart):			

To restore the services, the HCL support team has restarted the IIS services for the EAD application. After being re-started, it is working fine. The user confirmed the same. Precise root cause is under investigation.		
Business Impact: Users reported that the EAD portal was down.		
Root Cause/Potential Root Cause: Under Investigation		

Thanks and Regards,

Yogesh Kumar

Comment by [KUMAR Yogesh](#) [20/09/2023 16:50]

The HCL LC team has an IPR-279 with a union in the script that retrieves data and stores it in a temporary table. When tested in UAT, there was no problem, but when deployed in production, a large amount of data was fetched into the temporary table, and the issue occurred while deleting the data in that table. To fix this issue permanently, the HCL LC team has separated it into two different scripts, which fixed the issue and was confirmed by Adam.

General issue in B2Bi LC (HCLPB-1182)

The file TIERS sent by SAP blocked the VIA nodes because we were received couple of third parties without ID value inside the file. Eric worked on a modification in the interface program to avoid this kind of issue. The new version is ready.

Comment by [KUMAR Yogesh](#) [13/02/2023 18:01]

In WRC, had a discussion with Nicolas to extend the due date.

VIA is not available in Prod _ all users in Poland (HCLPB-655)
